Abstract (en)
[origin: EP0916514A1] The binding machine has a binding point (24), at least one rest (10, 12, 14) for folded sheets (30), a collecting chain behind a transporting and binding line (22) and another chain in front of it. The line extends along the folded sheet rests and through the binding point. The chains are parallel, at least in the region of some of the folded sheet rests (16, 18, 20). The collecting chains are in the form of a main one with the other one along side it. In the region of the binding point, only the main one extends along the line.
