Abstract (en)

[origin: EP0916583A2] The container (1) has a filling aperture (11) with a closing strip (13) fixed next to it. After filling, the closing strip can be laid over the filling aperture to close it. The closing strip has a holding part (16), by which the strip can be held against the container wall (12), preventing the strip being in an undefined position before it seals the container, which can thus be handled more easily.
