Abstract (en)

[origin: EP0916758A2] The half-heddle of a leno selvage unit has two sides which can be joined at their top ends to form a head. The foot of the half-heddle is shaped in such away that the magnetic force acting on the foot is smaller in the lifting direction (arrow 100) of the lifting heddles (2,3) than in the opposite direction. The foot has an upper end in the form of an edge so that the half-heddle can be magnetically braked through the lifting heddles (2,3).
