Abstract (en)

[origin: EP0916760A2] The device comprises screws which can be screwed into bores in the drum bearing (12). The screw shank is guided through openings in the rear wall of the machine. The screw head rests on a reinforcing profile or cross bar (14) fastened detachably on the rear wall, or on the rear wall itself. A spacer tube is incorporated between the inner rear wall surface or the reinforcing profile or the crossbar (14), and the drum bearing (12). In addition, the device features a form-locking device between the screw head and the tube end. A spiral pressure spring is incorporated between the screw head and the form-locking device.
