Abstract (en)  
[origin: EP0916775A2] The cistern interior (40) contains water intake and drainage fittings (13,20). At least one functional component of the fittings is integrated in the wall (2) of the cistern box. The component is a tube, which may form an overflow (10), an intake (16) or a fitting channel (21). The component may be formed integrally with a side wall (3,4). The cistern body is manufactured by blow moulding, and the component is formed integrally with it in the same process.
