Abstract (en)

[origin: EP0916790A1] Cover profile (10) for covering the end edge of a, particularly outwardly rotating, door (6), supported in a door casing (2), of which profile (10) the body, fixed to this end edge, has a tapering thickness at the outer side. In this way it is obtained that between door and casing a narrow gap can be realised without the danger that, when opening the door (6), the inner end edge thereof runs against the door casing (2). <IMAGE>
