Abstract (en)

[origin: EP0916816A1] The heat exchanger has at least one of the oil or coolant channels (2, 3) opposite a connector (7) with a receiver (8) in which the regulating valve (6) is fitted. The cover (4) over the regulating valve and at least one other channel is fitted with at least one connector (12). The temperature of one medium is taken directly in the heat exchanger (1). As the temperature rises, the valve moves in the opening direction. As it falls, the valve moves in the closing direction.
