Abstract (en)

[origin: DE19746845C1] The heating element has a ceramics carrier (3) with good heat conduction characteristics fitted into an opening in a cooking hob surface (2) made of ceramics glass, glass, ceramics, metal or plastics, with the surface of the hob having a truncated conical raised edge (2b) around the outside of the opening, on which the peripheral edge of the ceramics carrier is supported. The hob surface is contacted on the underside by a plate attached to the underside of the heating element, or has an integral dished region at the rear of the heating element inserted in the hob opening.
