Abstract (en)

[origin: EP0917398A2] The hearing aid includes a microphone, a signal processing arrangement, a loudspeaker as well as control elements for an adjustment of audio- or acoustic parameters. An assignment device (16) is provided for summarizing and/or deriving the audio- or acoustic parameters, whereby several summed up and/or derived parameters are adjustable over at least one control element (10, 11, 12, 12). The summarising and/or deriving of the audio- or acoustic parameters in the assignment device can be adjustable, preferably through programming of the assignment device.
