Abstract (en)

[origin: WO9805820A1] A cross-over between tracks (1, 2) for track-gripping, track-bound vehicles consists of two parallel adjacent movable track elements (3) coupled to each other by several connection elements (4) of constant length. The track elements (3) can take two or three defined positions and allow changing from one track to another without altering the track gauge. The connecting elements can be actuated by a common driving unit.
