Abstract (en)
[origin: WO9807170A2] The invention concerns a fuse-link, in particular for low-voltage high-breaking-capacity (l.v.h.b.c.) fuses, whose working fuse element (1) is monitored by an indicator fuse element (2) which is disposed electrically parallel thereto, a spring element holding a signalling element (3) in an indicator device (4) against the traction exerted by the indicator fuse element (2). According to the invention, the signalling element (3) is held in the indicator device (4) on a stirrup-shaped spring element (5) which is in turn held pivotably in the indicator device (4) and, at a spacing from the imaginary pivot axis, forms a mounting (6) for the indicator fuse element (2).
