Abstract (en)

[origin: EP0918023A1] The bowl-shaped container (1) with a lid (10) has two chambers (6, 7) separated by a sleeve (5) actuated by a retraction mechanism (17) of a sliding or screw system inside a base (3) integrally molded with the container. When the sleeve is retracted the two products are in mutual contact ready for mixing. The sleeve is made from a rigid or semi-rigid material, retracted through a passage surrounding the base (13) of the inner chamber.
