Abstract (en)

[origin: EP0918210A2] The rocket has control (1) and firing (2) rotors carrying a priming charges (10, 11). A base plate carries detonators (12, 13). A safety pin (7) locks the control rotor and a further pin (8) is in the path of the firing rotor, both mounted on a lever (5). The rocket acceleration when the propellant is ignited causes the rotors to rotate moving the priming charges towards the detonators. An electrical signal releases the safety pins when the rocket is fired.
