Abstract (en)  
[origin: WO9739660A1] The invention relates to a spring assembly for mattress supports, in particular for resilient support of the individual support elements of an arrangement of a plurality of support elements provided to support the mattress and distributed across at least one section of the mattress support or acting as a spring structure of a mattress which according to the invention is constructed in such a manner that one substantially hollow spring element (1) is provided which has external walls (2) arranged substantially uniformly about a central axis (I) extending in the direction of the springs.
