Abstract (en)

[origin: WO9735789A1] A method for the transportation of waste, a waste handling system and a waste container. Wastes of various types separated at source are collected separately by a waste collection truck (30) and transferred to a transfer station (32), where each type of separated waste is taken to the transfer container (33) intended for that type of waste. Each type of sorted waste is taken in a transfer container to a landfill site, an incinerator, a glassworks, a steelworks or other waste recycling site (34). The transfer container that is part of the waste handling system has a conical shape and round cross section. At its wider end, there is a hatch (41) for filling and emptying the container. The transfer container is filled in an upright position.
