Abstract (en)

[origin: WO9749676A1] This invention relates to ethylenically unsaturated polymerizable monomers of formula (I) wherein Y is (a, b, c, d, e, f, g, h or i) wherein A is (j, k, l, m, n or o) wherein each R is individually H, $-(CqH2q-O-)m-R<2>$, (p), etc., which are particularly suitable for use as wet adhesion promoters and in the preparation of self-crosslinking polymers. More specifically, the polymerizable monomers of the present invention are useful to promote adhesion in polymers and copolymers, and especially in aqueous emulsion copolymer latices which are used to prepare latex paints, as well as in the preparation of self-crosslinking polymers for coating systems.
