Abstract (en)
[origin: WO9809402A1] A method of managing a plurality of computer workstations interconnected by a network, the workstations including at least one policy group. The method includes the steps of receiving data relating to the policy group definition and generating a program representative of the policy group definition data. The generated program is sent to each of the plurality of workstations and the workstations instructed to check, by employing the program, whether or not each respective workstation belongs or does not belong to the at least one policy groups. The results of the checking step from each work station are returned to at least one managing station.
