Abstract (en)  
[origin: EP0919257A2] The clamp for the jib-arm system consists of a statically set mounting (Ar1,A11) with meters (11Ar,11Al, 11B) for measuring individual bearing forces. A base element (8) of the jib-arm system is detachably fixed to the support element (5) by means of the mounting consisting of at least three separate bearings which are positioned in relation to their center bearing points symmetrically with the plane of symmetry in the longitudinal direction of the base element.
