Abstract (en)
[origin: EP0919290A2] The output device has a thrust device with a cylinder (4) and piston arrangement. The piston is displaced by pressure on one end. A pressure chamber is at least partly formed in the cylinder on the drive side of the piston. A valve regulates a connection line between a pressurized gas bottle (7) and the pressure chamber. A locking device can hold the piston in any position. An Independent claim is also included for a pressure reduction valve for the output device.
