Abstract (en)

[origin: EP0919373A1] The machine has at least one rubber/rubber printing mechanism (2a-2c) to which the first and second strips (10,18) are fed in succession in a first mode for printing on one side of the first strip and a second side of the second strip. A third strip is delivered in a third mode for printing on both sides. Further printing mechanisms (20,22) print further colors on the first side of the second strip and the second side of the first strip in the first mode. Feed devices feed the first strip around the first further printing mechanism and the second strip around the second further mechanism. An Independent claim is also included for a method of simultaneous printing on two strips.
