Abstract (en)
[origin: EP0919374A1] The arrangement has a rotating gripper drum (5) which engages the edges of the attachments with controlled grippers (7). The drum axis is approximately perpendicular to the transport direction and at least approximately parallel to the sheet surface. An adhesive delivery arrangement (15) is positioned along the attachment transport path. The gripper drum has an associated pushing device which drives the attachments tangentially and synchronously wrt. the rotary path of the open gripper, which is driven in the same direction
