Abstract (en)

The invention falls within the sector relating to the filling of containers with oily liquids and in particular relates to an anti-drip nozzle which comprises a plurality of concentric tubular elements (8) which are inserted inside one another so as to create a plurality of slits or interstices (9) inside which, when there is no supply flow, the oily liquid product is retained as a result of capillarity and, where applicable, owing to the Venturi effect. <IMAGE>
