Abstract (en)

The window stay has a plate (9) fastened to a window frame cross-member (7), and an arm (10) which can pivot on the plate about an axis (11) perpendicular to it. The free end of the arm has a hole (13) receiving the end of a locking mechanism (5) when the window is held in a half-open position. The arm and plate also have components to limit the rotation of the arm to an angle (A) of between 90 degrees and 180 degrees, while in its retracted position the arm extends away from the long bolt catch plate (6).

Abstract (fr)

L'entrebâilleur (1) comporte une platine (9) adaptée à être fixée sur la traverse (7) du dormant (8), et une biellette (10) fixée de manière pivotante sur la platine (9). La biellette (10), dans sa position repliée sur la platine (9), s'étend dans le sens (16) s'éloignant de la tringle (4), et les moyens pour limiter le pivotement de la biellette (10) sont agencés pour autoriser un angle de pivotement (A) compris entre 90° et 180°. <IMAGE>
