Abstract (en)

[origin: EP0919900A1] A first rotating device (12) has a slider (30) extending perpendicularly to a first rotation axis. A second rotating device (14) has a sliding block (46) extending perpendicularly to a second rotation axis and aligned to accept the slider so that it is free to slide. Locking means (42) are capable of locking both the sliding block and slider in pre-defined angular positions.
