Abstract (en)
[origin: EP0919959A1] Allows personnel and simultaneous selection of a number of different services. The case (2) of the wristwatch is associated with antennas (41,42) and contains at least two different electronic modules (28,30,32), each permitting access to a particular service. The wristwatch also includes a selector and activation unit (22) for one of the electronic modules (28,30,32) as a function of the service required by the user. The unit (22) controls the displacement of an electrical contact (26) which connects the modules (28,30,32) to the service required by the user. The modules (28,30,32) are inserted in an independent electrical circuit (34,36,38). These electrical circuits are normally open, the contact (26) closes one of these circuits, when the user selects a particular service
