Abstract (en)  
[origin: EP0920086A2] The invention refers to a protector formed by a piece of plastic or similar material capable of carrying out two functions, firstly, providing splash-proof protection, and secondly, guiding a wiring bundle. It is formed basically of an eminently trunco-tetrapyramidal body consisting of two halves which fold onto one another by virtue of being joined by a hinge, the bases of this body having an eminently cylindrical opening which allows the wire bundle to pass through and into the inside of the protector, the bundle being conducted towards a connector which will be locked in place by the bottom part of the protector. <IMAGE>
