Abstract (en)
[origin: WO9746181A1] This invention is a therapeutic compression garment (80) made of a unitary piece of flexible, foldable, light-weight Velcro3-type loop fabric (15) having a central region for wrapping partially around a body part, a plurality of pairs of bands (11) integrally connected to the central region and extending outwardly in opposite directions from both sides of the central region to encompass the body part. The therapeutic garment (80) adapted for the leg in combination with an ankle/foot wrap (60) for applying therapeutic compression to the leg, ankle and foot, and a method for treating disorders requiring compressive therapy involving the step of applying the garments of the invention to the indicated body part.
