Abstract (en)

[origin: EP0920821A1] The system comprises fittings operating under control within a corner cabinet and has a parallel rod linkage (14) so that the doors (10,11) are lowered in the cabinet body against a spring force before the shelf carousel is rotated. The parallel rod linkage follows the rotation of the column (13) with fixed mounting points. The doors are at the drive link (15) of the parallel linkage, and the drive take-off link (16) is connected to a control lever (18) which swings on a fixed point at a control cam (23).
