Abstract (en)
[origin: EP0921499A2] The flat item (2) with its edge contour (8) is fixable to the edging (7) of the recess (5') by a slight force and can be further released by a slightly elastic bending of the collection unit (1). The items fit into the recesses in such a way that their free surface is binding with the front surface (6) of the collection unit. The collection unit can be of one-piece construction or two-piece with a baseplate (3) and a cover plate (4) adhered to the baseplate and in which the recesses are formed as breakthroughs. The bases (9) of the recesses are so formed, that the deformation of such a base from the rear surface (10) of the collection unit suffices to release a flat item located in the recess.
