Abstract (en)

[origin: EP0921510A2] A geographical region (100) is divided into a number of areas (110-124) according to a pre-defined standard. The apparatus (300) filters received traffic messages and only those that relate to a particular one (120) of the defined areas are passed on for processing. According to the invention, an area of interest (126) is specified by expanding the particular defined area (120) into at least one direction (130).
