Abstract (en)

[origin: EP0820747A1] An absorbent article having an improved elastic feature which is easy to handle during manufacture and subsequent processing of the absorbent article. The composite elastic feature comprises at least one extruded elastomeric layer and at least one extruded, substantially non-elastomeric layer which form a film. Before the film is elasticized by activation the non-elastomeric layer inhibits the elastic properties of the elastomeric layer, said inhibiting effect being lost after activation. The absorbent article can be any absorbent article having an elastic feature, preferably integral disposable absorbent articles.
