Abstract (en)

[origin: WO9807567A1] The tabbed edge (60) of a divider sheet (52) has at least one strip (64) releasably attached thereto. The strip helps the printer (or copier) (72) sense the sheet when being fed strip end first or last (landscape direction) into the printer or copier. When fed in the portrait direction, the strip guides the sheet along the guides of the feed tray (70) thereby preventing skewing of the sheet. After the printer or copier has printed the desired indicia (80, 82) on the tabs and/or body of the sheet, the strip is removed from the sheet and discarded. The strip can be attached to the sheet with adhesive (66) or by a microperforation line (206).
