Abstract (en)
[origin: WO9808683A1] A printing unit has two parallel frame sides (1), between which transverse, rotatable rollers (3, 8, 13) are supported in bearing brackets (6, 11, 16) which are arranged in each frame side and displaceable in the plane thereof under the action of a power unit (31) for clamping the bearing brackets in the machine frame. Each frame side (1) has a recess (27), in which the bearing brackets (6, 11, 16) are arranged and which is defined by two abutment portions (28, 29), between which the clamping forces act. The power unit (31) in each frame side has a contact point in a gap (34) between one abutment portion (28) and the neighbouring bearing bracket (16).
