Abstract (en)

[origin: DE19727362A1] The present invention relates to new polymerisates of unsaturated saccharide acids (aldonic, uronic or arsenial acids) as well as to the salts or derivatives thereof, wherein said polymerisates contain a double bond in the ring or in the open-chain form. This invention also relates to copolymerisates with ethylenically unsaturated compounds. These compounds are prepared and obtained by the radical-initiated (homo-, co-) polymerisation of (A) ethylenically unsaturated monosaccharide, disaccharide or oligosaccharide acids and acid derivatives such as esters, amides or nitriles which contain a double bond in the ring (endocyclic) or in the open-chain form, of unsaturated chemically-protected or not and enzymatically or chemically modified mono-, di- or oligosaccharide acids and of derivatives or blends of the above-mentioned precipitated compounds (A), or else by the copolymerisation of the constituents (A) with (B) monomers or monomer mixtures of ethylenically unsaturated compounds.
