Abstract (en)
[origin: WO9809013A1] A narrow fabric intended for use as part of a garment or appliance to be worn on part of the body of a wearer is provided with one or more areas of friction-generating material in the form of a relatively thin film. In a modification of the invention, the film is applied to an "open" fabric and is arranged to follow the structure of the fabric so that the film of friction-generating material exhibits a plurality of openings corresponding to openings in the fabric. The invention includes a process and apparatus for producing the fabric.
