Abstract (en)

[origin: EP0922660A1] A cutter (1) assembly has a web (3) feed (2) from a roller to a station (4) marking the commencement of a section (7) in which the web is cut longitudinally. The machine has a winder section which rolls up the divided web on e.g. two rollers (18, 19). The web winds over part of the surface of a roller (8) which also incorporates a web cutter. The roller has a suction section (11) which retains the web section in contact with the roller surface during rotation.
