Abstract (en)

An apparatus for subjecting materials in sheet form to continuous traction, which has the particularity that it comprises, on a supporting frame, a first roller (4) and a second roller (5) which are spaced from each other and have parallel axes. At least one sheet-like element (20) to be subjected to traction winds around the rollers. At least one redirection element (10) is provided between the rollers (4, 5) for the exit of the sheet-like element subjected to traction from the traction apparatus (1). <IMAGE>
