Abstract (en)
[origin: EP0923171A2] The plug-connection socket includes a plug-in region (2) bounded by a rear wall (8) and an insulation piercing or displacement zone (4) or solder pin zone, placed on the other side of the rear wall. At least one contact conductor arranged in the plug-in region is taken to the insulation piercing or displacement zone or solder pin zone. The contact conductor (6) is taken through the rear wall perpendicularly, or more specifically it is taken through the rear wall in the region of the latter's central height zone.
