Abstract (en)  
[origin: FR2760607A1] The invention concerns a set for applying (1) a crumbly product (P) with consistency ranging from viscous to solid having an application surface (2), comprising: a shell (3) open at one end (30), the shell end opposite the open end (30) having a bottom (32); a support (4) on which the product (P) is mounted, said support being axially movable inside the shell; driving means (6) for adjusting the support height inside the shell; actuating means (5) accessible from the shell bottom for controlling said driving means; and resilient means (7), axially deformable, to enable, when pressure is exerted substantially axially on the application surface (2), an relative axial displacement between the product and the shell, countering the return force exerted by the resilient means (7). The driving means are separate from the resilient means.
