Abstract (en)

[origin: WO9855277A2] A carriage drive for a food slicer. The carriage can be adjusted from a manual operation to an automatic motor-driven operation. In order to set the slicer at automatic operation, the slicer includes a carrier which reciprocates on a slide rod. When a transport portion of the carriage supporting arm is attached to the carrier, then the carriage is driven by the motor. The motor is connected to the carrier through a series of four linkages which provide smooth motion, high drive efficiency and high reliability.
