Abstract (en)
[origin: FR2760560A1] The invention concerns a device for integrally re-creating a poster consisting of printed vertical strips (1, 2, 3) representing parts of the poster, by fixing said strips on the vehicles on the spaces provided, positioning the printed surfaces edge to edge. Said vertical strips comprise a vertical non-printed margin (4) arranged to be covered by the next strip to prevent air from passing between the strips and the vehicle body and to prevent the text, or picture, from being deformed or the strips from being damaged. Also for the same protective purpose, the margin (4) of the first poster strip (1) placed at the vehicle front is slipped underneath a protective plate (6) vertically fixed on the vehicle body.
