Abstract (en)

[origin: DE19751798A1] The bag producing process makes the bags from sections of double foil web sectors of a flat laid hose foil web (4) of thermoplastic material. It is controlled relative to the bag forming devices and elements so than a preset marking is made on the foil web. If the position alters, automatic controls of the bag forming devices (6-9) are rapidly moved to a leveling correction setting. The device used has a controlling and setting device in working connection with at least one of the bag-forming devices.
