Abstract (en)

[origin: EP0924353A2] Two buttons (4,5) are provided in a housing (2) and cooperate with a pressure pulse transducer (6), which is configured so that pressing one or the other button produces two different pressure pulses. The pressure pulse transducer is preferably in the form of two bellows, one assigned to each button, which are rectangular in cross section, having narrow sides half the width of the broad sides.
