Abstract (en)
[origin: EP0924376A2] The bearing has two structural pieces with a spacing (d) from the frame (BR) and casement (F) so that the rotary axis (100) runs next to the plane of the casement (F). The two structural pieces are fitted on the casement and frame to produce the spacing of the rotary axis from the plane of the casement. An Independent claim is included for a method for mounting swing doors where rotary axis is kept clearly outside and next to plane of casement.
