Abstract (en)

[origin: EP0924396A1] The cover (7) has, in its central region, a tubular element (8) which can house the intake pipe (5) of the oil-circulation pump and which is of a length such that, in the condition of use, it extends into the sump (4) beyond the end of the intake pipe (5). The lower end (8a) of the tubular element (8) is provided with a filter (10). The cover (7) also has holes (12) with which shutters (13) are associated for preventing oil from returning from the sump (4) to the block (2) of the engine (1). <IMAGE>
