Abstract (en)

[origin: EP0924474A2] The air outlet is located at the end of an air feed channel. Adjustable elements to influence the air flow in the channel are positioned on the air outlet. The elements divide the air flow through the jet nozzle (5) and the exit field (4) next to it. The elements contain at least one flow divider (6.1), and a throttle, associated with the exit field. The throttle has two relatively moveable perforated panels.
