Abstract (en)  
[origin: EP0924814A2] The power rail is of a type that can be fixed to a surface such that power take off connections can be made at selected points. The rail is produced in an insulating plastic material (6) and is shaped to receive the earthing conductor (9) and the live and neutral conductors (7,8). The conductors are retained by being set into U shaped spring elements (11).
