Abstract (en)  
[origin: WO9738680A1] A skiboard (100, 200) has a central portion with front and rear ends being between 15 and 23 centimeters in width, a central waist (112) having side edges with concave curvatures of radius between 3 and 20 meters, and an upwardly curving front shovel area (104) having a front tip (102) raised at least two centimeters. The skiboard is between 150 and 200 centimeters in length with a longitudinal camber elevating the waist between 1 and 6 centimeters. Left and right loose-heel binding devices (108L, 108R) are secured to the skiboard, one behind the other and parallel to each other at an angle of less than 35 degrees with the axis of the skiboard. The skiboard may split to alternately form separate right and left ski portions (233R, 233L). Bindings with mounting plates (228R, 228L) may be alternately mounted on the ski portions or used to join their centers together. Fasteners join the front and back ends of the ski portions to assemble the skiboard.
