Abstract (en)
[origin: EP0829404A2] A locomotive brake control unit includes a manifold (104) having a brake cylinder module (BCEP) for controlling pressure at the brake cylinder port in response to at least train braking signals and first and second ports on the control unit for receiving electropneumatic resetting and non-resetting dynamic brake interlocks (DBI-1, DBI-2) respectively to control the train braking signals during dynamic braking, if an interlock module is present in one of the interlock ports.
