Abstract (en)
[origin: DE19637496A1] The present invention pertains to an interchangeable container (1) for transportation of goods, which can be laid down on one face (A), the bottom of the front area (6) of which is provided with a shear dowel for hooking the container in the coupling direction to a power puller, and a bottom cover plate extending like a gooseneck up to the central and back areas, resulting in a clear region to receive said shear dowel emerging downwards from the container, the front area being strengthened both by a solid wall (15) and an asymmetrical understructure - seen in cross-section - of the body.
